## NEODEVICES ENTERAL SAFETY SYSTEM

NeoDevices' **Enteral Safety System** includes extension sets, feeding tubes and an oral syringe converter designed specifically to be incompatible with standard IV or Luer Locking devices. NeoDevices' **Enteral Safety System** complies with JACHO's proposed 2006 National Patient Safety Goals and Requirements.

The Enteral-Lok Oral Syringe Converter and Cap, permanently converts a male luer locking syringe to an oral syringe. The Enteral-Lok is manufactured in the standard orange so that it is easily distinguishable for Enteral Use.

NeoDevices' Enteral Only Extension sets are designed to connect to an Oral Syringe on the proximal or end. At the distal end, our extension sets features and industry standard orange enteral connector. Our enteral only extension sets include single and bifurcated sets with mini-bore tubing.

NeoDevices has focused our manufacturing capabilities on providing the industry's safest and highest quality enteral devices on the market today. With these standards as a mission, NeoDevices provides a full range of long-term feeding tubes in either Silicone or Polyurethane, both manufactured with our exclusive Enteral Only Hub that accepts only other oral devices (i.e. Oral syringes and Orange Enteral Only Connectors)

<b>SYRINGE CONVERTER AND CAP</b>		
EL-100	Oral Syringe Converter with Cap	100/box
